SUMMARY

Senior Frontend Engineer with **8+ years of experience** building large-scale SaaS platforms using **React** and **TypeScript**. Expertise in frontend architecture, design systems, and performance optimization, driving UI consistency and maintainability across global teams while enhancing user experience.

TECHNICAL SKILLS

- **Core Technologies**: React, TypeScript, JavaScript (ES6+), Frontend Architecture, Design Systems, Performance Optimization, AWS
- **Frontend**: Redux, React Query, React Hooks, Next.js, HTML5, CSS3, Responsive Design, CSS-in-JS
- **Backend**: Python, Node.js, MongoDB, Redis
- **Testing**: Jest, Pact, Robot Framework, Playwright
- **Cloud & DevOps**: AWS (EC2, ECS, S3, Lambda, CloudWatch), Docker, CI/CD, Serverless Framework
- **Tools**: Webpack, Babel, Git, Linux, MacOS

EXPERIENCE

SHERPANY **May 2021 - Jan 2026**
Senior Frontend Engineer *Remote (Europe)*

- Developed reusable **design system components** in TypeScript adopted across multiple product teams, improving UI consistency and accelerating feature development.
- Led migration of **~80% of Redux-Saga data layer to React Query** and TypeScript, simplifying asynchronous state management and improving maintainability.
- Integrated repositories into a **monorepo architecture** and implemented CI/CD pipelines, improving collaboration and streamlining deployments across engineering teams.
- Implemented **enterprise PDF document workflows using PSPDFKit**, enabling secure document viewing and annotation inside the platform.

TREND MICRO **Jan 2019 - Jan 2021**
Senior Frontend Developer *Taipei, Taiwan*

- Led frontend architecture for **the CloudOne Network Security** console using React and TypeScript, enabling the product's transition to a scalable SaaS platform used by enterprise customers.
- Increased frontend test coverage from **45% to 90%** by introducing Jest, Pact, and Robot Framework testing strategies, significantly improving release stability.
- Founded and organized a **frontend guild** connecting Taipei and Austin engineering teams to share best practices and improve cross-team collaboration.
- Introduced **Storybook UI documentation** to standardize component development and improve maintainability.
- Improved large-dataset rendering performance by **50%** using virtualization techniques, demonstrating strong performance optimization skills.

POSITIVE GRID **Apr 2018 - Dec 2018**
Frontend Engineer *Remote, Taiwan*

- Refactored codebase to reduce **~50% LOC** and improve build performance.
- Migrated the frontend framework from **AngularJS to React** using Webpack and Docker, which modernized the tech stack, improved page load speed by **30%**, and enabled faster development of new features.
- Developed **real-time audio visualization components** using D3.js and SVG in a Next.js app, providing interactive feedback that improved user engagement and helped users better understand audio data.

YiChi Information **Mar 2017 - Mar 2018**
Frontend Engineer *Taipei, Taiwan*

- Developed the Zines editor with React and Next.js, delivering a stable editing interface that the product team adopted for publishing content
- Implemented **internationalization using react-intl and OneSky**, enabling the application to support multiple languages and reach a broader user base
- Improved page load performance by **10×** by implementing Redis caching for frequently accessed data.
- **Built CI/CD pipelines with CircleCI, Docker, and AWS**, automating builds and deployments to improve software reliability and reduce manual release time by 50%.

EDUCATION

Canadian College of Technology and Business **2025 - Present**
Diploma, Data Engineer and Analytics *Vancouver, Canada*

Tatung University **2010 - 2015**
Bachelor's Degree, Information Management *Taipei, Taiwan*

CERTIFICATIONS

- **Cisco Certified Network Associate (CCNA)**
- **IELTS Overall: 6.0**
